

## PRODUCT FORMULARY

# Glutathione (Liposomal)

- Master Antioxidant†
- Supports Detoxification and Immune Health†
- Enhanced Absorption

† These statements have not been evaluated by the Food and Drug Administration. This product is not intended to diagnose, treat, cure, or prevent any disease.

Glutathione has been shown to be beneficial in protecting cells and tissues from damage by heavy metal toxicity and other environmental toxins, breaking them down into less harmful compounds and preparing them for excretion. Vinco's **Glutathione** promotes these benefits and more and has a higher level of absorption due to its liposomal base.†

### Glutathione

- An antioxidant produced in cells and comprised primarily of three amino acids: glutamine, glycine, and cysteine
- Levels in the body can be reduced by factors such as poor nutrition, stress, and age†
- Has been shown to reduce oxidative stress, which can reduce the risk of certain diseases†
- Often thought of as an anti-aging supplement, as it has been purported to protect against issues such as Alzheimer's, cataracts, heart disease, Parkinson's, and more†
- Works to help prevent inflammation†
- Plays a central role in the proper function of T-cell lymphocytes (white blood cells), the frontline soldiers of the immune system, by increasing their numbers†

### Essential Phospholipids

- A class of lipids that make up the backbone of the cell membrane
- Supports mitochondrial function†
- Directly tied to brain and neurological health due to their high presence in the brain†
- Can enhance and increase the neurotransmitter acetylcholine in the brain, which has the ability to protect against diseases such as dementia and Alzheimer's†
- May help to strengthen the gut lining and support healthy liver function†

### Liposomal Delivery

- Traditionally, orally administered vitamins and drugs have low bioavailability, meaning that the product loses potency while it is being metabolized, before it is absorbed by the cells in the body†
- Liposomal delivery has been shown to increase efficacy, bioavailability, absorption, and delivery†
- It works to protect the nutrient against GI issues†
- Mimics the structure of a cell membrane to specifically target the tissues it needs to without affecting other areas†
