Although many think of metabolism as solely to do with how easy or hard it is for you to lose or gain weight, this internal process controls so much more. In simplest terms, your metabolism takes the nutrients you consume and converts them to energy, to be used for everything from breathing to circulating your blood. Decreased thyroid functioning can have negative effects on the metabolic process, which is why Vinco's Thyroid Pituitary Plus is designed to naturally support your metabolic pathways.†

Thyroid Gland

- A gland consisting of two lobes on either side of the windpipe, typically not outwardly visible or able to be felt by pressing externally on the neck
- Produces hormones that regulate the body's metabolic rate, controlling vital body functions including breathing, heart rate, body temperature, muscle and digestive function, body weight, brain development, menstrual cycles, and bone maintenance
- The two hormones produced by the thyroid gland are T3 (Triiodothyronine) and T4 (Thyroxine), which are synthesized from iodine and tyrosine
- The thyroid also contains C-cells which produce calcitonin, which regulates calcium and phosphate levels in the blood
- Complications may arise when the body produces too much or too little hormone, leading to hyperthyroidism or hypothyroidism respectively

Pituitary Gland

- A small gland that sits in a bony hollow at the base of the skull
- A "master gland", the hormones it produces control many of the body's processes such as metabolism, growth, reproduction, and blood pressure
- One specific hormone produced by the pituitary gland is the thyroid stimulating hormone (TSH) which tells the thyroid how much hormone to produce and secrete

Deer Antler Velvet

- The soft, fuzzy hair which covers newly formed antler bone and cartilage and is shed and regrown each year
- Traditionally, deer antler velvet has been used to strengthen bones, improve immunity, and treat various ailments†

Guggul (10% Guggulsterones)

- Gum resin that is tapped from plants in the incense family in a similar fashion to how maple syrup is removed from trees
- Considered to have anti-inflammatory and antioxidant properties†
- Has been shown to promote weight loss, treat hypothyroidism, and manage cholesterol and blood sugar levels†
